

ANJANI KUMARI

• +91-8051894220 • kumarianjani7060@gmail.com • <https://github.com/anjanikumari12>
• B.Tech ECE Student • Java Developer • DSA Problem-Solver • AI & Web Application Builder

EDUCATION

National Institute of Technology Arunachal Pradesh | B.Tech – ECE | CGPA: 6.66 2024 – 2028
C.M.Sc. College, Darbhanga, Bihar | Intermediate (71%) 2022 – 2024
Sati High School Parari, Darbhanga, Bihar | High School (86%) 2021 – 2022

RELEVANT COURSEWORK

Programming & Data Structures Object-Oriented Programming Database Management Systems (SQL)
Web Development Fundamental Digital Logic Design

PROJECTS

Unbiased AI Decision Tool | Google Solution Challenge 2026 <https://unbiased-ai-tool.streamlit.app/>
Python • Streamlit • Google Gemini AI API • Pandas • NumPy • scikit-learn • AIF360 • Streamlit.io

- Developed a no-code AI-powered bias detection web application analyzing datasets across 3 sectors — Job Hiring, Loan Approval, and Healthcare — for discrimination based on protected attributes such as gender, age, and region
- Integrated Google Gemini AI API to generate intelligent natural-language explanations of detected biases and actionable recommendations for mitigation
- Implemented CSV file upload & processing pipeline with automated statistical bias analysis, Before vs After comparison, and traffic-light bias severity indicator
- Built PDF report download feature enabling organizations to export bias analysis results; deployed full application on Streamlit (cloud)
- Aligned with UN SDGs 5 (Gender Equality), 8 (Decent Work), 10 (Reduced Inequalities), 16 (Justice); built with Team Solvation for Google Solution Challenge 2026

Transport Management System | Full Stack Web Application

MongoDB • Express.js • React.js • Node.js • JWT

- Built a full-stack transport management system using the MERN stack for efficient transport operations. Developed REST APIs to manage buses, routes, drivers, vehicles, and bookings.
- Integrated JWT authentication to secure admin login and protected dashboard access. Connected MongoDB Atlas for cloud database management and responsive React-based frontend

Amazon-Inspired Frontend Web Page | Frontend Development

HTML5 • CSS3 • CSS Flexbox • Responsive Design

- Designed a responsive e-commerce homepage with structured components — navigation bar, search bar, product grid, and footer — using CSS Flexbox architecture
- Applied responsive web design principles for cross-device compatibility; developed understanding of frontend layout systems and modular CSS structuring

TECHNICAL SKILLS

Programming Languages: Java, Python, C

Data Structures & Algorithms: Arrays, Strings, Linked Lists, Stacks, Queues, HashMaps, Sorting & Searching

Web Technologies: HTML5, CSS3, Bootstrap, JavaScript, Streamlit

Backend: Node.js, Express.js

Database: SQL — Queries, Joins, Aggregation, Basic Schema Design, MongoDB, MongoDB Atlas

AI / ML Tools: Google Gemini AI API Integration, Bias Detection & Analysis, AIF360 (IBM Fairness Library)

Tools & Platforms: Git, GitHub, Render.com (Cloud Deployment), Google AI Studio, VS Code

Core Concepts: Object-Oriented Programming, REST API Fundamentals, SDLC, Responsive Web Design

ACHIEVEMENTS

- Google Solution Challenge 2026 Participant — Team Solvation | AI bias detection tool addressing UN SDGs 5, 8, 10 & 16
- NCC Cadet — demonstrated discipline, leadership, and teamwork at National Cadet Corps
- 2nd Runner-Up, Debate Competition, NIT Arunachal Pradesh — recognized for technical communication & analytical reasoning. Active Member, ECE Society, NIT Arunachal Pradesh
